***Allowance of Application # 10/675,248***

1. The following communication is in response to Applicant's Amendment and Terminal Disclaimer, received 12-October-2006. Claims 1-9 and 11-28 are pending in the application, and claim 10 was canceled by the Preliminary Amendment of 11-March-2004. This application is a Continuation of 09/713,732, filed on 15-November-2000, now USP 6,741,958; which is a Continuation of 09/096,774, filed on 12-June-1998, now USP 6,173,247.

***Reasons for Allowance***

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter.

2.1 The instant application is directed to a nonobvious improvement over the coding algorithms described in the article, *BEC++: A Software Tool for Increased Flexibility in Algorithm Development*, by Harton et al., which discloses a fixed-point software implementation tool with syntax similar in look and feel to that of floating-point C, wherein the capabilities of BEC are extended through the introduction of C++ language features and object-oriented techniques.

2.2 The improvement comprises an apparatus and method for modeling a digital signal processor, wherein a high level programming language is used to model the data representations and operations of a target processor in a manner such that: a) the model generated data is bit-wise matchable to the machine language output results of the target processor, and b) the development time of a real-time implementation of certain commands on

**In re Application of: Maurudis et al.**

the target processor is decreased. These patentable distinctions are included in each of the independent claims 1, 11 and 20.

**2.3** The art of record fails to teach, suggest, or render obvious the useful, concrete and tangible <modeling of a target digital processor output that is bit-wise matchable to the actual operation steps of the processor resulting in a decreased development time of a real-time implementation of certain commands on the target processor> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at <page 5, line 5 through page 23, line 27, and Figures 1-10>. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.

***Response Guidelines***

**3.** Any comments considered necessary by applicant **MUST** be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should clearly be labeled "Comments on Statement of Reasons for Allowance".
